

Managed Cybersecurity Solutions That Go Beyond the Alert

Zyston is a fully managed cybersecurity solution and easily the most complete security program management offering that exists today.

But what makes us different? It's simple. Our philosophy and execution are designed around the gold standard in operational effectiveness: people, processes, and technology.

When your cybersecurity vendor is only focused on technology, it limits your organization's ability to mature and strengthen your cybersecurity posture over time. You receive an alert, and it's up to you to respond and remediate, which puts you in a perpetual defensive loop.

Our program management methodology is designed to go beyond the alert, providing you with critical insights, technology requirements, and process expertise that enable you to build, operate, and mature an effective information security program at a reasonable cost.

Client Focused from End to End

Zyston's security solution is comprised of four primary categories:

Managed Security Services

Risk Assessments

Offensive Security Services

Human Capital Services

People

Zyston provides end-to-end managed cybersecurity services that close the gap on the global cybersecurity talent shortage. Our dedicated Cybersecurity Program Manager (CPM) represents an elite standard of service unmatched in cybersecurity industry. We also offer human capital services including, fractional services, contract solutions, and executive search to ensure your organization has the cybersecurity talent it needs to lead your industry.

Processes

Zyston offers a carefully-crafted, comprehensive range of end-to-end cybersecurity services designed to help our clients build, operate, and mature an effective information security program. Our processes are tailored to your organizational needs and backed by years of success and a commitment to continued improvement.

Technology

The core of Zyston's technology is a powerful, proprietary security platform called CyberCAST. CyberCAST is a security program management platform that delivers critical insights into your threat susceptibility. We apply a combination of technical penetration testing and a detailed security assessment with industry benchmarking to score and continually track your organization's risk.

These insights are then used to establish a strategic and tactical roadmap to improve your security program maturity score. CyberCAST continually records and reports on progress, tracking program maturity over time.

Learn More

Reach out to Zyston today to find out how we can help. We are passionate about what we do and have a knack for simplifying the complex into language you and your executive team will understand. We work with companies in a range of industries that includes food and beverage, hospitality, manufacturing, logistics, software, and high-compliance sectors, including healthcare, financial services, and energy.
